RE: Suppliers Partnership – Invitation to Engage in Collaborative OEM / Supplier Biodiversity Project

As OEMs and members of the Suppliers Partnership for the Environment (SP) we share a common vision of working together to promote environmental conservation and sustainability across the automotive supply chain and want to encourage our suppliers to engage in voluntary programs that can help their companies to create and maintain healthy businesses and environments.

For these reasons, and more, we are encouraging our suppliers and colleagues to consider incorporating biodiversity into their environmental program and to work together with us through the Suppliers Partnership for the Environment (SP) to collectively achieve greater impact and success while protecting natural resources and improving our communities.

As industry leaders we feel we have a unique opportunity to demonstrate leadership by working strategically together to collectively achieve positive impacts on biodiversity, employees, and communities, and would ask that your company consider working together with us through this SP biodiversity initiative by making a commitment to put in a pollinator garden at one of your sites this year.

If you could, we would ask that you complete the attached form to indicate your organization's commitment to work to implement one pollinator project at one of your sites this year. Please return the attached form to Kellen Mahoney at SP by e-mail (kmahoney@navista.net) no later than May 16, 2018 to confirm your support for this effort.

We walk through this life with others, let us together make a difference. We look forward to hearing from you.

Sincerely,

Susan D. Kelsey
Global Biodiversity Program Manager
General Motors

Kevin M. Butt
Director, Environmental Sustainability
Toyota Motor North America

Sam Qureshi
WM Sustainability Services

Suppliers Partnership for the Environment (SP) – 1156 15th Street, NW, Suite 800, Washington, DC 20005
